Wisconsin Private Wells Tested for Atrazine

April 2003

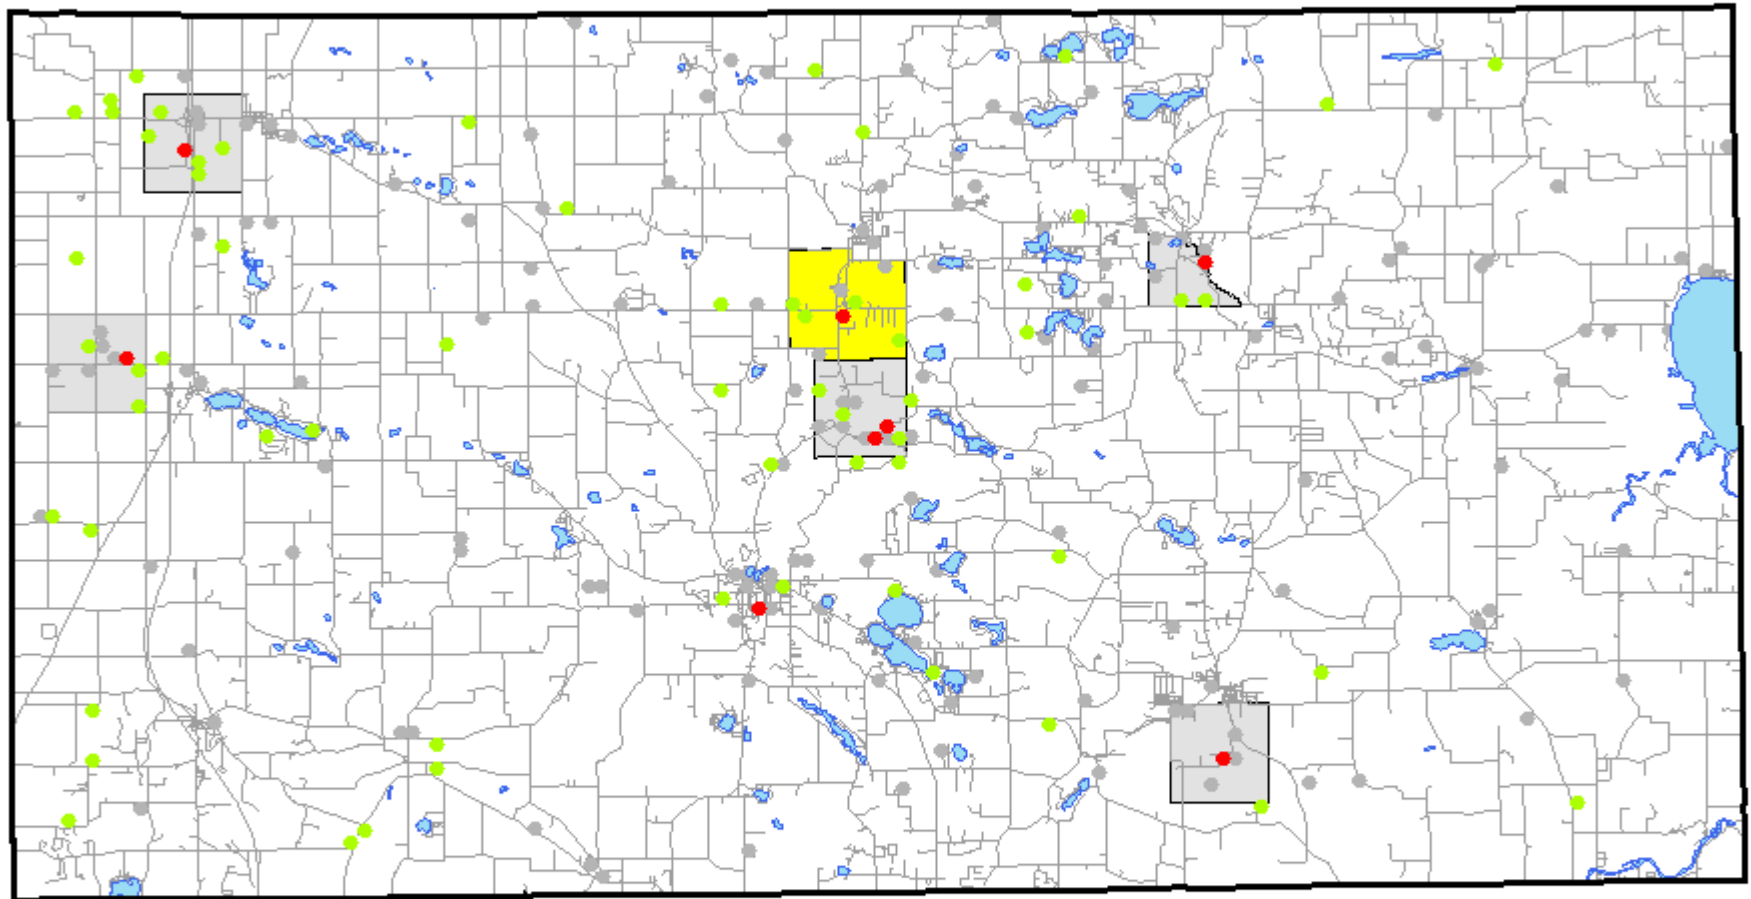

Wells tested for atrazine

- No detects
- Detects below health standard
- Detects at or above health standard

Waushara County Existing and Proposed Prohibition Areas

Atrazine Detections

- Not Detected
- Less than 3 ppb
- Greater than or equal to 3 ppb
- Proposed Prohibition Area
- Existing Prohibition Area
- Road
- Lake or Major River

0 2 4 8 Miles

**Or, contact your county drainage board for maps of
drainage districts.**

Some other things we have . . .

Endangered species: DATCP staff use DNR's Natural Heritage Inventory database to locate endangered and threatened species occurrences and then collect and maintain program data, including Public Land Survey System locations or GPS coordinates related to these sites. GIS layers are created and maintained using this data. All of DNR's and some of DATCP's data are confidential.

For work with this data, please contact Ursula Peterson, DATCP, P.O. Box 8911, Madison, WI 53708-8911; ph. # 608-224-4538; e-mail: ursula.peterson@datcp.state.wi.us

Private Drinking Water Wells: DATCP compiles well information and sample results from many different sources, including its own sampling efforts, DNR's Groundwater Retrieval Network (GRN), pesticide manufacturers and other federal, state, and local groundwater sampling initiatives. In most cases, PLSS descriptions for wells are used to generate WTM coordinates based on tables of PLSS unit centroids acquired from DNR. The Wisconsin Unique Well Number (WUWN) can be used to link attribute data to GIS well points. Water Quality Program staff produce statewide GIS data layers and metadata for private wells tested for pesticides and nitrate.

Farmland Preservation Program:

We have no GIS data available under this program, but we do have hundreds of exclusive agricultural zoning ordinances and 70 county agricultural preservation plans.

LIVESTOCK GUIDANCE

Local Planning for Livestock Operations in Wisconsin

- Works within existing legal framework
- Promotes agricultural planning
- Standardize criteria for siting and expansion
- Improve procedures to assure timely and fair decisions
- Make the process better reflect state's strong commitment to animal agriculture

Wisconsin's Soil Survey Database (SSURGO): SSURGO includes the digitized detailed soil maps for each soil survey area in Wisconsin (spatial data) and the accompanying soil property and interpretations database (tabular data). A digitized orthophoto base is not part of SSURGO, but is often used as a layer in GIS systems.
